SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 clones and 2 clones with a minimum of 2 clones and 3 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           at URL:

Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Muc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Esports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL;

Consortium/LLNL at: http://image.llnl.gov Series: IRK plate: 135 Row: K Column: 2 This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 16418454.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 72. 419
70. 199
70. 70 total in Region: Lipocalin / cytosolic fatty-acid binding protein family. Lipocalins are transporters for small hydrophobic molecules, such as lipids, steroid hormones, bilins, and retinoids. Alignment subsumes both the lipocalin and fatty acid binding protein signatures from PROSITE. This is supported on structural and functional grounds. Structure is an eight-stranded beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /tränslation="mpadlegtwitlssdnpegyvlalgidpatrkiakilkpokvie

Gerards, W.L., Hop, F.W., Hendrike, I.L. and Bloemendal, H.

Cloning and expression of a human pro(tea) some beta-subunit cDNA: a
homologue of the yeat PRS4 subunit essential for
peptidylglutamyl-peptide hydrolase activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              prosome beta-subunit=multicatalytic proteinase complex [human, ingNA, 959 nt].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /produčt="prosome beta-subunit"

Consortium/Linn at: http://image.llnl.gov Series: IRAL Plate: 36 Row: b Column: 6
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 7661539
This clone has the following problem: The cds is short compared to the longest cds in the locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PRI 11-DEC-2002
Bicosanoid and Glutathione metabolism). It includes proteins such as Prostaglandin E synthase. This enzyme catalyses the synthasis of PGBZ from PGHZ (produced by cyclooxygenase from arachidonic acid). Because of structural similarities in the active sites of FLAP, LTC4 synthase and PGB synthase, substrates for each enzyme can compete with one another and modulate synthetic activity" /db_xref="CDD:pfam01124"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

```
Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 67 Row: k Column: 12
This clone was selected for full length sequencing because it passed the following selection criteria: Genomescan gene prediction, Similarity but not identity to protein.

```

```
John This family consists of several mammalian (Calsarcin). This family consists of several mammalian (Calsarcin). This family consists of several mammalian (Calcineurin-binding proteins. The calcium- and calcineurin-binding proteins. The calcium- and calmodulin-dependent protein phosphatese calcineurin has been implicated in the transduction of signals that control the hypertophy of cardiac muscle and slow fibre gene expression in skeletal muscle. Calsarcin-1 and calsarcin-2 are expressed in developing cardiac and skeletal muscle during embryogenesis, but calsarcin-1 is expressed specifically in adult cardiac and slow-twitch skeletal muscle, whereas calsarcin-2 is restricted to fast skeletal muscle. Calsarcins represent a novel family of sarcomeric proteins that link calcineurin with the contractile apparatus, thereby potentially coupling muscle contractile apparatus, thereby potentially coupling muscle expressed specifically in skeletal muscle and is enriched in fast-twitch muscle fibres. Like calsarcin-3, and calsarcin-2, calsarcin-3 interacts with calcineurin, and calsarcin-2, calsarcin-3 interacts with calcineurin, and calsarcin-2 are calcineurin, gamma-filamin, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /translation="MPLSGTPAPNKRRSSKLIMELTGGGGESSGLNLGKKISVPRDV

DrallI (CACCATGTG)

Description: Ist strand orDNA was synthesized considered to the product was digested with Sfil and size selection was performed to using specific 5' and 3' primers and amplified by PCR. The PCR product was digested with Sfil and size selection was performed to exclude fragments 4.1.5kb.The Sfil and size selection was performed to the DrallI sites of pME185-FL3. Khol sites just outside the DrallI sites can be used to isolate the cDNA insert. Libraries were constructed by oligo-capping method (Sugano et al., University of Tokyo, Institute of Medical for sequencing (5' end primer [CGACCTGCAGGTGGGG];

Science). Custom primer used for sequencing (5' end primer [CGACCTGCAGGTGGAGCAG]).

                                                                                                          ORIGIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This close was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accuracily this particular cDNA clone. However, there artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to

/note="Homology region A with Elk-1 protein (Ets domain)
/note="Homology region A with Elk-1 protein (Ets domain)
is bp 150-417, amino acids 1-89; Homology region B with
Elk-1 protein, required for cooperative ternary complex
formation with Sap is bp 565-617, amino acids 136-157;
Sequence diverges from SAP-1B at bp 1229, amino acid 360;
Homology region C with Elk-1 protein, core of regulated
transcription activation domain, is bp 1203-1355, amino
acids 35-402, (S/T)P motifs conserved between SAP-1A and
Elk-1 are located at amino acids T354, T361, T366, S381,
S387, T420, S425, corresponding to bp 1209-1214, bp
120-1215, bp 1245-1250, bp 1290-12155, bp 1308-1313, bp

Description: 1st strand cDNA sprimed with an oligo(dT) primer farged corpution: 1st strand cDNA beas primed cDNA was synthesized using specific 5' and 3' primers and amplified by PCR. The PCR product was digested with Sfil and size selection was performed to exclude fragments 41.5kb.The Sfil and size selection was performed to exclude fragments 41.5kb.The Sfil digested PCR product was cloned into distinct DrailI sites of pME18S-F13. XhoI sites just outside the DailII sites can be used to isolate the cDNA insert. Libraries were constructed by oligo-capping method (Sugano et al., , Institute of Medical Science, University of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PAT 08-JUN-2001

R. Site: pMEIRS-FL3 (Acc.No. AB009864)
R. Site: DraIII (CACGATGTG)
Description: 1st strand clow, was primed with an oligo (dT) primer Description: 1st strand clow, was primed constructed was synthesized using specific 5' and 3' primers and amplified by PGR. The PCR product was digested with Sfil and size selection was performed to exclude fragments <1.8kb.The Sfill-digested PCR product was cloned into distinct DraIII sites of pWEISS-FU3. XhoI sites just outside the praIII sites can be used to isolate the cDNA insert. Libraries were constructed by oligo-capping method (Sugano et al., Institute of Medical Science, University of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  through the I.M.A.G.E. Consortium/Linn at: http://image.llnl.gov
Series: IRAK Plate: 93 Row: i Column: 17
This clone was selected for full length sequencing because it
passed the following selection criteria: GenomeScan gene
prediction.
           Submitted (11-APR-2003) National Institutes of Health, Mammalian Gene Collection (MGC), Cancer Genomics Office, National Cancer Institute, 31 Center Drive, Room 11A03, Bethesda, MD 20892-2590,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Osada,N., Hida,M., Kusuda,J., Tanuma,R., Iseki,K., Hirai,M., Terao,K., Suzuki,Y., Sugano,S. and Hashimoto,K.
Isolation of full-length cDNA clones from macaque brain cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Eutele:

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 117 Row: i Column: 8 This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /codon_start=1
